

## Clime Australian Income Fund

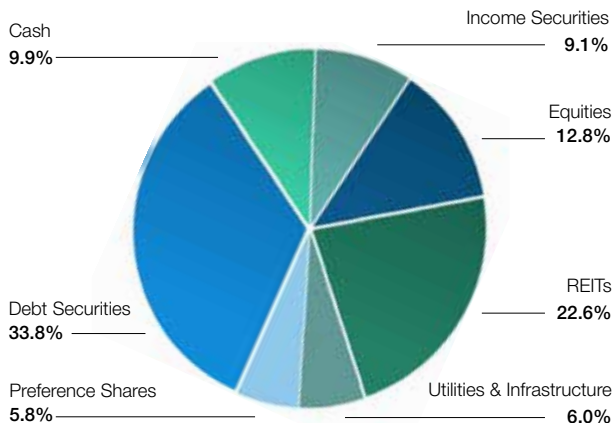

The Fund seeks to deliver strong risk-adjusted total returns and has the dual objective of generating a level of income of 2% to 3% beyond the RBA cash rate p.a. and over time keeping pace with inflation. It aims to achieve these objectives with strong capital stability.

We participated in a Maurice Blackburn bond (yield of 7.45% p.a.) and took the opportunity during weakness in the financial sector to top up Westpac Banking Corporation ahead of its upcoming dividend.

The US 10y treasury yield began the month at 2.86% and finished at 3.06%, pushing through the 3.00% level for the second time in recent months as the US Fed raised rates 25bp at the end of September. The Australian 10y bond yield tightened 15bp to finish the month at 2.67%, retracing to the yield back in July 2018. In these uncertain times, where the US 10-year treasury is likely to consolidate over 3% in coming months, our strategy is to focus on the gradual accumulation of suitable yield assets to balance income with price stability.

Consistent with the Fund's objective of providing capital stability while generating regular quarterly income, the Fund's realised 1-year volatility of 2.6% p.a. remains markedly below that of the headline ASX200 (equity) Index (8.3% p.a. measured over weekly periods).

## Asset Allocation

## Snapshot

Portfolio Return (Quarter)	Recent Distribution	Income (Annual)	Fund Size
1.7%	0.8045 (cents per unit)	3.8%	\$17.7m

## Performance and Volatility of Return (30/09/18)

	1 month	3 months	6 months	1 year	2 years	3 years	Inception
Portfolio Return <sup>^</sup>	-0.10%	1.72%	3.37%	4.21%	6.39%	7.65%	7.14%
Income	0.73%	0.73%	2.41%	3.81%	3.96%	3.76%	3.64%
Capital Growth	-0.82%	0.98%	0.93%	0.39%	2.34%	3.75%	3.20%
Volatility	-	-	-	2.57%	2.58%	3.37%	3.36%

Note: Compound (geometric) returns are used in the above table's segmentation of Income and Capital Growth. This may result in small differences when compared with a simple addition of Income and Capital Growth components.

<sup>^</sup>Portfolio return is based on the change of the unit price including distributions but excluding franking credits. Franking credits will enhance this portfolio return, and historically this has added about 0.30% pa to the return of the Fund.

\*Inception: Wholesale Units: 1 July 2015. Performance figures for more than 1 year are annualised, calculated after all applicable fees and taxes. Performance figures compare unit price to unit price for the given period. The returns do not include the benefit of franking credits.

\*\* Volatility is based on the annualised standard deviation of weekly price movements.

## Distributions

Period Ending	Wholesale Units (cents per unit)
30 September 2018	0.8045
30 June 2018	1.8352 (+0.2025 franking credits)
31 March 2018	0.7455
31 December 2017	0.7602
